

# Platform mounted CIP system

## USES

A complete CIP system assembled on a SKID or platform is in large part an automated system for washing tanks, vats and pipework circuits for the food-manufacturing industry.

It is composed of recovery tanks, a washing pump, a delivery line and the solution return line. Selectable cycles make it possible to automatically recover and regenerate the cleaning solution and the rinsing water.

The system reduces water consumption, washing solutions and energy, and avoids waste-water pollution.

## TECHNCAL DETAILS

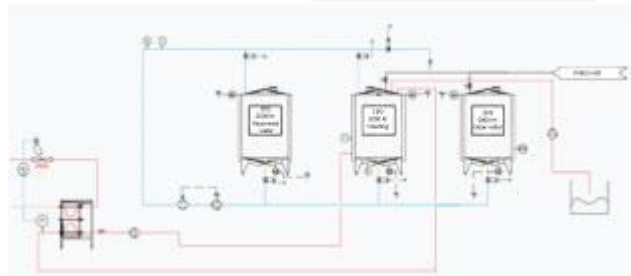

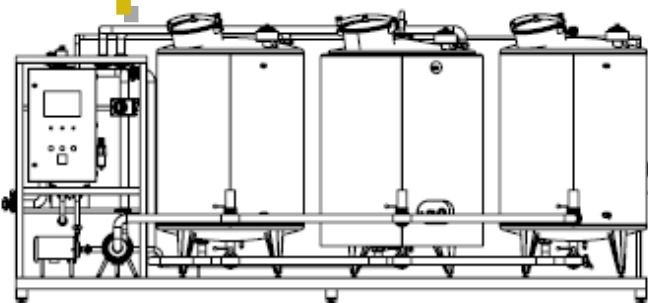

*Automatic heating and dosing*

*Photos for information only*

- Bespoke design from three to five tanks.
- Manual CIP with manual or automated butterfly valves.
- Capacity from 500 to 2500 litres or more per tank.

## SKID EXAMPLE

## OPTIONS

*Variable flow rate*

*Control panel*

*Pneumatic valve*

## *Touch screen*
